## Single-Use Instruments for Endosee® Advance

CooperSurgical is pleased to offer two new disposable instruments for use with the Endosee® Advance direct visualization system. The system's integrated working channel enables the introduction of these specialized instruments to perform diagnostic and therapeutic procedures during in-office uterine assessment exams. Choose from a selection of sterile single-use tools or reusable stainless steel instruments based on procedure or preference.

Biopsy Forceps

Single Action Scissors

### Sterile, Disposable, Convenient

- Single-use, sterile design for optimal convenience
- Enables a range of diagnostic and therapeutic procedures
- Ergonomic handle design for precise control
- Use under direct visualization with Endosee® Advance

### IMPORTANT SAFETY INFORMATION

Endosee Advance Direct Visualization System is indicated for viewing the cervical canal, uterine cavity, or female urinary tract, for the purpose of performing diagnostic and therapeutic procedures. Hysteroscopy is contraindicated in patients with known or suspected pelvic inflammatory disease. Hysteroscopy may be contraindicated in patients with inability to distend the uterus, cervical stenosis, cervical/vaginal infection, uterine bleeding or menses, known pregnancy, invasive carcinoma of the cervix, recent uterine perforation, or intolerance to anesthesia. Cystoscopy is contraindicated in patients with severe coagulopathy or febrile patients with urinary tract infection. Please refer to Instructions for Use for more information.
